

IN THE CLAIMS

Please add claims 42-47 as follows:

- A2
42. A method for intentionally signaling a presence as recited in claim 27 wherein the message is a voice message.
 43. A method for intentionally signaling a presence as recited in claim 27 wherein the programming individual is the first individual.
 44. A method for intentionally signaling a presence as recited in claim 27 wherein the message is programmed into the receiving device prior to transmitting the presence signal by the first individual.
 45. An intentional presence system as recited in claim 1 wherein the message is a voice message.
 46. An intentional presence system as recited in claim 1 wherein the individual is the first individual.
 47. An intentional presence system as recited in claim 1 wherein the message is programmed into the receiving device prior to the presence signal is sent from the transmitting device.

Please amend the claims as follows:

- Sub B
- A2 Cont
1. (Amended) An intentional presence system comprising:
 - a transmitting device at a first physical location that is responsive to a command intentionally initiated by a first individual at said first physical location to develop a presence signal intended for a second individual at a second physical location; and
 - a receiving device located at said second physical location which is receptive to said presence signal and which is operative to generate an indication to said second individual of said first individual's presence with respect to said transmitting device;

A3
Concl

wherein said indication comprises a message programmed into the receiving device by a programming individual other than said second individual.

SW
82

27. (Amended) A method for intentionally signaling a presence comprising:

HR

transmitting from a first physical location in response to a command intentionally initiated by a first individual at said first physical location a presence signal intended for a second individual at a second physical location; and

receiving at said second physical location said presence signal and generating an indication to said second individual of said first individual's presence;

wherein said indication includes a message programmed into a receiving device located at said second physical location by a programming individual other than the second individual.
